

## MS Solutions at Heimtextil

MS (Hall 3.0 – Booth J61) is showcasing both versions of JP4 textile printing machines.

- JP4 model – 3200mm printing width – is printing in combination with Digistar Bravo: JK Group's disperse ink. JP4 is an ink and software open system equipped with Kyocera KJ4B-300dpi printheads....

Whilst being the “baby” in MS’s fabric product range for direct textile printing it offers Industrial Production Speed: 150 sqm/hour @1500 (double CMYK) and 85 sqm/hour @1500 (8 single colours). JP4 is the joining link between paper and textile printing thanks to its possible double configuration: paper & fabric; revealing-itself a very profitable investment.

- JP4 EVO model – 3200mm printing width – is printing in combination with Digistar Bellagio: JK Group's reactive ink which is debuting at Heimtextil. JP4 EVO is an ink and software open system equipped with Kyocera KJ4B-600dpi printheads, offering Industrial Production Speed: 220 sqm/hour @1500 (double CMYK) and 160 sqm/hour @1500 (8 single colours). JP4 EVO has been developed for non-elastic fabric offering: high-print quality results as the “sis” JP4 by adding high productivity and reliability crucial in direct textile printing.

Both JP4 models printing in mode up to 16 drops from 4 to 72 pl.

Live demo will help visitors to figure out the accuracy and reliability of MS's printing systems which allow to scale productivity and production speed without losing image quality.
